1. I want to check the customer's location to deliver the product.
2. I want access to his phone number in case of inconveniences.

Project brief:

The project will be an e-commerce website that sells products online, but only sells products of known brands. The website will consist of a Home page the customer can navigate through the website, also to a page which includes sales and special offers. We will be using ReactJS, NestJS, TypeORM, MySQL for this project.
